40-80% Highly
questionable

Control of antimicrobial resistance: time for action

The essentials of control are already well known

Huovinen & Cars, BMJ 1998; 317:613-14

« To reduce antibiotic consumption we need a multifaceted approach that includes education of doctors; widely accepted recommendations for good clinical diagnosis and treatment; and follow-up of compliance with such guidelines... restriction policies such as the requirement for written justification or automatic stop orders may be useful in hospital settings. »

COUNCIL

COUNCIL RECOMMENDATION

of 15 November 2001

on the prudent use of antimicrobial agents in human medicine

(Text with EEA relevance)

(2002/77/EC)

THE COUNCIL OF THE EUROPEAN UNION

Having regard to the Treaty establishing the European
Community, and in particular Article 152(4) thereof,

highlights that antimicrobial resistance increases markedly and inexorably due to communicable diseases and leads not only to a diminution of quality of life but also to additional health and medical care costs, and that action needs to be taken at Community level.

Council recommendation of 15 November 2001 on the prudent use of antimicrobial agents in human medicine

been accompanied by an increasing prevalence of micro-organisms that have acquired resistance to one or more of these so-called 'antimicrobial agents'. Antimicrobial resistance poses a threat to public health, may prolong the suffering of patients, increase healthcare costs and has economic implications for society. Therefore concerted action is necessary at Community level to contain this problem by encouraging the prudent use of antimicrobial agents in human medicine and better hygiene and infection control.

- (b) The Council of the European Union on 8 June 1999 adopted a Resolution on antibiotic resistance entitled A strategy against the microbial threat (1). The resolution

- (i) To develop strategies for prevention of infections and containment of resistant pathogens, accurate surveillance systems generating valid, reliable and comparable data on incidence, prevalence and modes of spread of resistant micro-organisms as well as on prescription and use of antimicrobial agents must be established throughout the Community. They should form an essential component for an overall surveillance strategy to address the problem of antimicrobial resistance and in particular, to assess the potential link between the use of antimicrobial agents and the development of resistance among these pathogens.

Antibiotic resistance – The faceless threat

Otto Cars, Per Nordberg

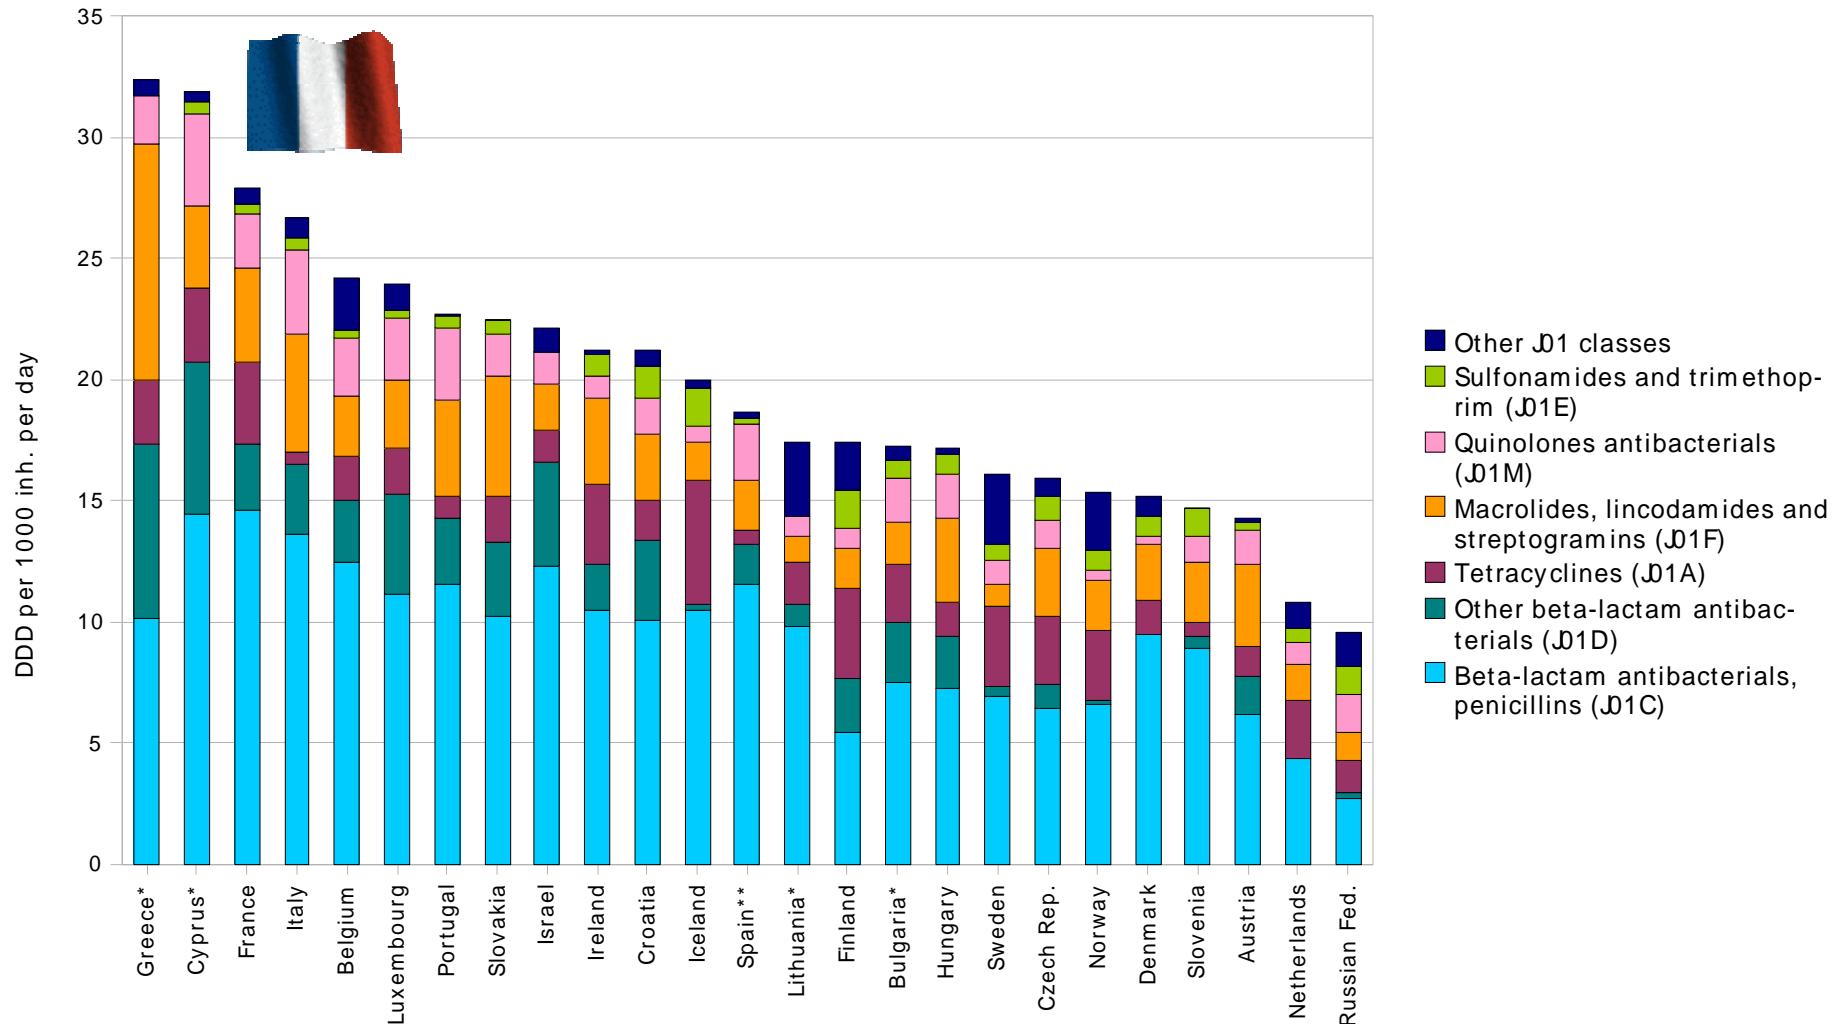

Uppsala meeting 2004

- « The complexity of factors influencing antibiotic consumption includes cultural conceptions, patients demands, diagnostic uncertainty, economic incentives, the level of training among health staff and pharmacists, and advertising to prescribers, consumers and providers from the pharmaceutical industry.
- The relationship between antibiotic use and resistance is complex. Underuse,..., inadequate dosing and poor adherence to therapy, may play as important a role in driving resistance as overuse. The use of broad-spectrum antibiotic agents as a substitute for precise diagnostics or to enhance the likelihood of therapeutic success increases the rate of selection of resistant bacteria... »

ET MAINTENANT... ?

Total Outpatient Antibiotic Use in 25 European Countries in 2006

(on-going validation for some countries)

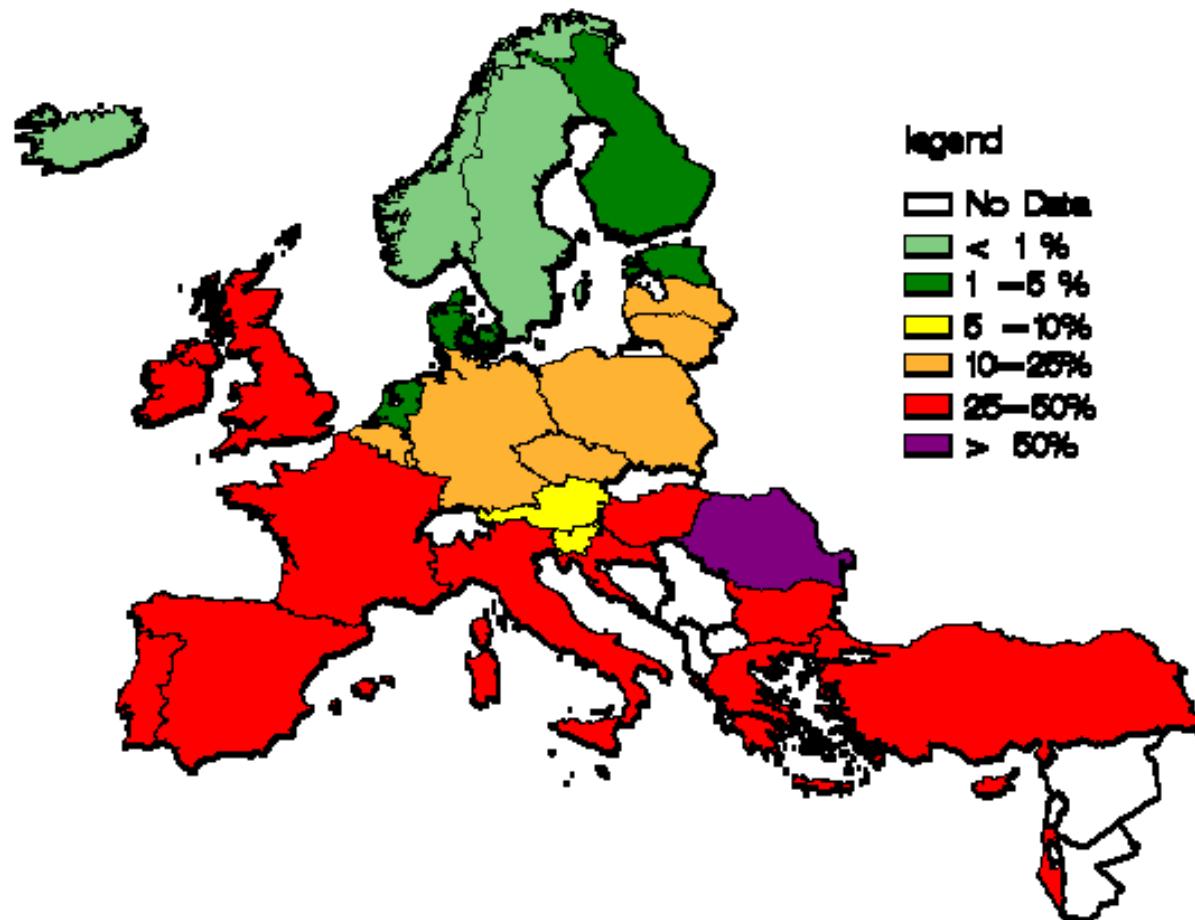

* Greece, Cyprus, Lithuania, Bulgaria: total care, i.e. hospital and primary care combined.

** Spain: reimbursement data, which do not include over-the-counter sales without a prescription.

Methicillin-Resistant *Staph. aureus* in Europe, 2006

13,7 % des bactériémies-EB à l'admission (< 48 h) = ESBL +

10,8 % de portage fécal sur entrants "tout-venant" en service de médecine

Fluoroquinolone-Resistant *E. coli* in Europe, 2001-2006

Plan Antibiotiques – phase 2

- Maintien du soutien politique
- Actions
 - Ville ET hôpital ET santé animale
 - Grand public ET professionnels
 - Adultes ET enfants
 - Antibiotiques : moins ET mieux
- Suivi
 - Consommations ET résistances
 - National ET européen
 - Pathologies ET épidémiologie

- Outils diagnostiques
- Couverture vaccinale
- Sensibilisation, mobilisation, actions = TOUS
- Education, formation
- Évaluation
- Recherche
- Gestion globale du risque infectieux
- Intégration dans les projets européens

4 groupes de travail

1. Pratiques médicales et formation des professionnels (P. Choutet)
2. Actions grand public, petite enfance et milieu scolaire (P. Dellamonica)
3. Communication professionnelle (R. Cohen)
4. Système d'information, surveillance recherche (D. Guillemot)
+ site internet / comité de pilotage (S. Alfandari)

Actions européennes

- Présidence de la CE; 4 workshops
- Actions de :
 - Slovénie : incitations politiques
 - France : campagnes « ville »
 - Tchéquie : actions « hopital »
 - Suède : promotion de la recherche

18 Nov 2008

1st European « Antibiotic Awareness Day »

Suggested logo/slogan

COLD? FLU?
TAKE CARE
NOT ANTIBIOTICS

An initiative of the European Union

**REMEMBER,
ANTIBIOTICS
WON'T HELP YOUR
DEFENCES AGAINST
A COLD.**

The best way to treat most colds, coughs or sore throats is plenty of fluids and rest. For more advice talk to your pharmacist or doctor.
