

Quelle PrEP pour quels PrEPeurs ?

Dr Jade GHOSN

Situation (1)

- Femme, 26 ans
- Vient de commencer à se prostituer
- Dit que la plupart de ses clients demandent, voire « exigent » des rapports sans préservatif
- Information et explications données sur la PrEP en continu
- Très déstabilisée par la période de 21 jours avant d'être « protégée » par la PrEP

Efficacy of "on demand" oral PrEP against vaginal SHIV infection in macaques

Optimal Timing of PrEP For Women

TDF-FTC
Daily

vs time-driven (2x/wk + post sex)
vs event-driven (pre-post sex)

- Randomized 178 sero-negative women to oral daily (n=59), time-driven (twice weekly+post-sex) (n=59), or event-driven (pre-post sex) (n=60) PrEP.

	Daily PrEP	Time-driven PrEP	Event-driven PrEP
Coverage sex act	75%	56%	51%
Adherence	75%	65%	53%
TFV detected if sex reported past week	68%	58%	41%
Seroconversions	0	2	2

- **Daily dosing** resulted in good adherence (higher drug levels) & better **coverage** of sex acts, compared to intermittent use.

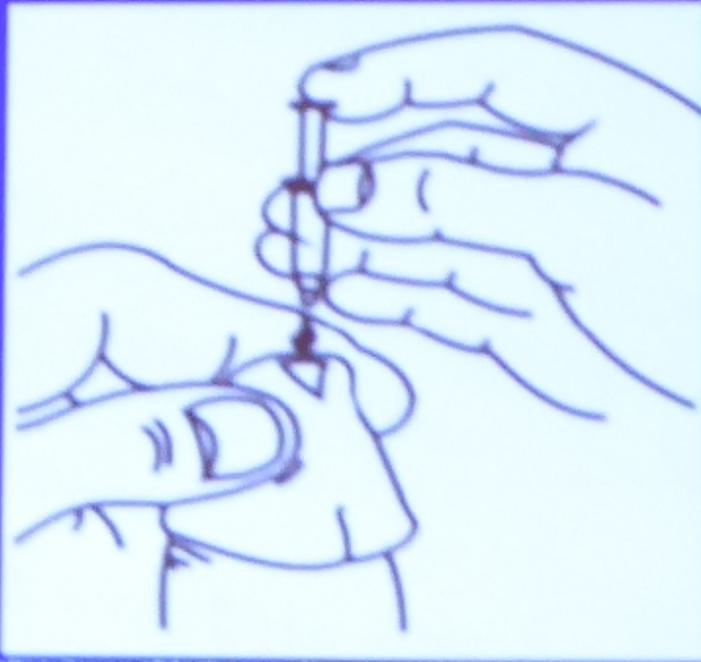

Daily dosing may foster better habit formation and provide the most forgiveness for missed doses at observed adherence levels.

Situation (2)

- Homme, 47 ans, hétérosexuel
- Voyage à l'étranger 1 à 2 jours par mois
- Rappports sexuels avec des « escort-girls » lors de ces séjours courts à l'étranger, pas toujours protégés par préservatif
- A entendu parler de la PrEP « à la demande », très intéressé
- AMM : en continu
- BUM HAS : intermittent « n'a été étudié que chez les HSH »

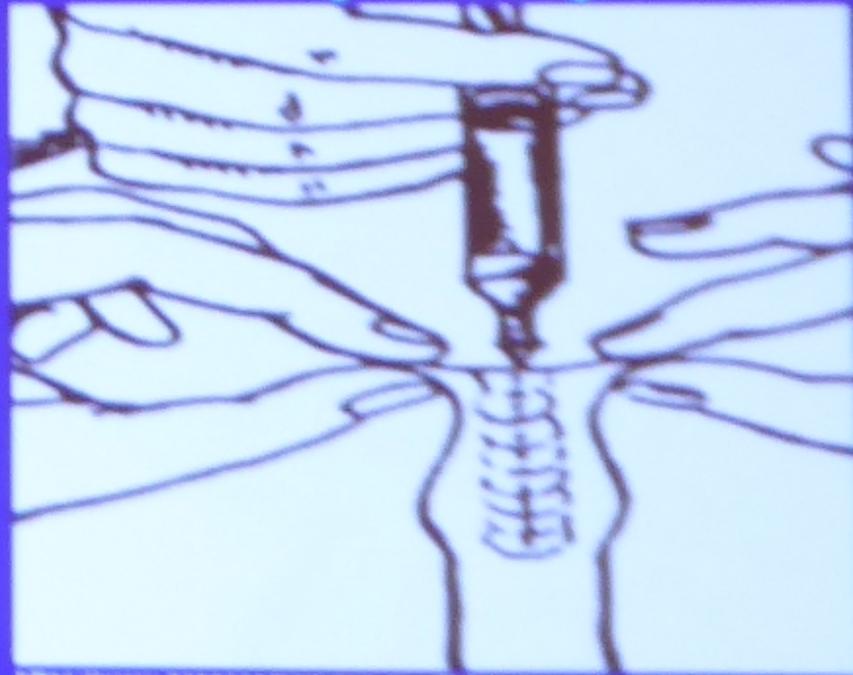

No-contact inoculation

Garber D et al., submitted

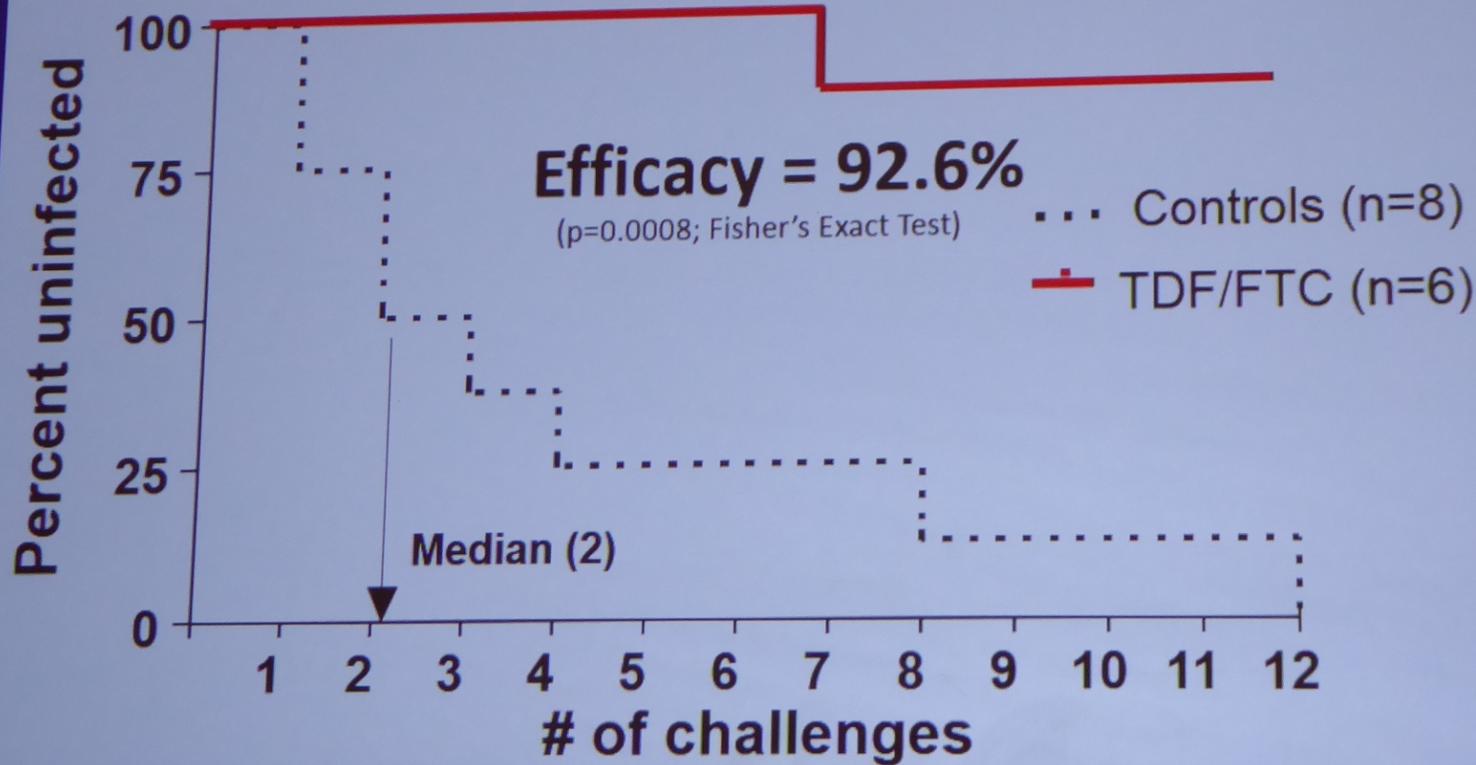

Model validation

- Efficacy of human-equivalent doses of TDF/FTC
 - Same study design that demonstrated high efficacy of TDF/FTC against rectal and vaginal exposure
 - TDF/FTC (22/20 mgkg⁻¹) administered by oral gavage 24h before and 2h after SHIV exposure
- Challenge once per week (12 weeks); 20 week washout

Efficacy of oral TDF/FTC

Survival Estimates

HR=10.07
(Log-Rank p=0.032)
